

CCpilot V705 NEXT GENERATION IMX8X BASED DISPLAY

The **CCpilot V705** is a 7" display computer based on an i.MX 8DualXPlus processor with powerful GPU integration to support premium HMI applications for instrumentation, video, control, automation, infotainment, and telematics.

The 7" high brightness, optically bonded, IPS-type screen offers best-in-class contrast and viewing angles for superb visibility in all conditions without any risk of fogging.

Equipped with 2 Deutsch connectors, wired interfaces include Ethernet, CAN, high-speed USB, and optional Bluetooth and Wi-Fi for wireless connectivity. The CCpilot V705 has 2 input channels, and 2 configurable high side outputs.

The CCpilot V705 is available with LinX, our open and modular software platform. It

includes firmware and OS support, prepackaged application toolchains for Qt and CODESYS, and application modules for commonly required functionality; including fast boot, vision systems and connectivity.

System designers can choose the level, configuration, and development tools that fit their needs and can therefore work with, not against, the expertise and resources they already have.

With the open platform approach, customers can base their solution on a robust and secure base while keeping the flexibility to use in-house or 3rd party development resources.

With its vast software capabilities and state-of-the-art hardware, the CCpilot V705 is a future-ready platform for machine intelligence.
